## I. THE VISIONARY — HORACIO PAGANI

### Origins of a Legend

Horacio Pagani was born on June 10, 1955, in Casilda, Santa Fe Province, Argentina. From an early age, he was obsessed with both art and engineering — a rare combination that would define his life's work. As a teenager, he built a tiny Formula car in his parents' garage, driven by the dream of creating machines that were as beautiful as they were fast.

His heroes were Leonardo da Vinci and Juan Manuel Fangio. From da Vinci he learned that art and science are not opposites but two halves of the same pursuit; from Fangio he drew the passion for speed and perfection on four wheels. Pagani wrote to Fangio seeking advice, and the five-time Formula 1 World Champion responded, launching a mentorship that would eventually help the young Argentine reach Italy.

### Journey to Italy & Lamborghini

In 1983, with a one-way ticket and a handful of models under his arm, Horacio Pagani arrived in Modena — the heartland of Italian supercar manufacturing. He joined Lamborghini as a worker on the factory floor, rapidly rising through the ranks due to his relentless drive and inventive mind.

At Lamborghini he championed the adoption of carbon fibre — a material then largely confined to Formula 1. He built Lamborghini's first carbon-fibre department and was instrumental in the development of the Countach Anniversary, the LM002, and the Diablo. When Chrysler acquired Lamborghini, creative freedom shrank. Pagani began to imagine his own car — something no factory would ever sanction.

### Founding Pagani Automobili — 1992

In 1992, backed partly by Juan Manuel Fangio (who also helped Pagani secure the AMG engines that would power the Zonda), Horacio founded Pagani Automobili S.p.A. in a small workshop in San Cesario sul Panaro, just outside Modena. The philosophy was radical: every Pagani would be a hand-crafted artwork, each one taking months to build, with carbon fibre and aerospace-grade materials at its core.

The company's motto — Arte ed Tecnica (Art and Technology) — is not marketing copy. In the Pagani atelier, craftsmen use medieval leather-working tools alongside CNC machines, and each car contains more than 1,000 individually sourced and hand-finished components. No two cars are identical.

## II. THE ZONDA ERA (1999 – PRESENT)

*"Zonda" is named after the Zonda wind of the Andes — a warm, powerful force of nature that races down from the mountains across the Argentine pampas.*

### Pagani Zonda C12 (1999–2002) — The Beginning

Unveiled at the 1999 Geneva Motor Show, the Zonda C12 stunned the automotive world. Nobody expected a new supercar brand from a tiny Italian workshop — least of all one that matched the performance and beauty of Ferrari and Lamborghini while surpassing both in craftsmanship. The C12 featured a bespoke tubular steel and carbon fibre monocoque, a naturally aspirated Mercedes-AMG V12 engine, and a body sculpted by Pagani himself with aerospace precision.

| Rarity         | Extremely Rare — Museum/Collection |

## Pagani Zonda S (2002–2007) — More Power, More Drama

The S raised displacement to 7.0 litres, extracting 547 hp from the AMG V12. The body received wider air intakes, a more pronounced rear spoiler, and the iconic four-pipe exhaust system that would become Pagani's auditory signature. Road testers described the driving experience as visceral, raw, and profoundly involving — a car that demanded complete attention and rewarded it with a sensory experience unlike any other road car.

## Pagani Zonda F (2005–2009) — In Honour of Fangio

Named in tribute to Juan Manuel Fangio, the Zonda F was the most extreme road Zonda to that point. Aerodynamics were completely reworked in collaboration with Dallara — the same company that designs Formula 1 chassis. The result was a car generating significant downforce while remaining road legal. At the Nurburgring Nordschleife, the Zonda F lapped in 7 minutes 27 seconds — sensational for a road car in 2006.

| Rarity         | Rare — Strong Investment Record |

## Pagani Zonda R (2009) — Track-Only Hypercar

The Zonda R was never intended for the road. It is a full racing car built for track use only, featuring carbon fibre construction throughout, a sequential 6-speed gearbox, slick tyres, and an AMG V12 producing 740 hp. Only five were built, making it among the rarest Paganis ever made. In 2010, it set a Nurburgring Nordschleife lap record of 6 minutes 47.5 seconds — a time that smashed the previous production car record by nearly 40 seconds.

|                |                                    |
|----------------|------------------------------------|
| Engine         | Mercedes-AMG 6.0L V12 (Race-Spec)  |
| Power          | 740 hp (552 kW)                    |

| Weight         | 1,070 kg (2,359 lb)                |
| Units Built    | 5 (track only)                     |
| Original Price | ~\$2.0M USD                        |
| Current Value  | \$7M – \$12M+ USD                  |
| Rarity         | Pinnacle — One of Rarest Ever Made |

## Pagani Zonda Cinque (2009) — Five for the Road

'Cinque' means five in Italian — and only five were built. The Cinque brought track-level aerodynamics to a road car, using the same Dallara aero package developed for the Zonda R but homologated for public roads. The rear wing generates massive downforce, and the car features pushrod suspension with inboard springs. Each car was completely unique in colour and specification. All five sold immediately, and none have been offered publicly for resale — they remain in private hands.

| Weight         | 1,210 kg (2,668 lb)              |
| Units Built    | 5 Coupe + 5 Roadster = 10        |
| Original Price | ~\$1.7M USD                      |
| Current Value  | \$10M – \$18M+ USD               |
| Rarity         | Ultra Rare — Among Most Valuable |

## Pagani Zonda Revolucion (2013) — The Final Zonda

The Revolucion was announced as the final chapter of the Zonda story — the most extreme Zonda ever created. Built around a full CFRP monocoque with titanium roll cage, it produces 789 hp through a race-spec AMG V12 and features a 7-speed sequential paddle-shift gearbox with ABS and traction control calibrated for circuit use. Downforce reaches 900 kg at maximum speed. Five units were built and delivered to customers who also received track driving instruction from a Pagani test driver.

|----------------|----------------------------|
| Engine         | Mercedes-AMG 6.0L V12 Race |
| Power          | 789 hp (588 kW)            |
| Torque         | 730 Nm (539 lb-ft)         |
| 0–100 km/h     | 2.7 seconds                |
| Top Speed      | 350 km/h+ (217+ mph)       |
| Weight         | 1,070 kg (2,359 lb)        |
| Units Built    | 5 (track only)             |
| Original Price | ~\$2.8M USD                |
| Current Value  | \$15M – \$25M+ USD         |
| Rarity         | Absolute Pinnacle          |

PAGANI

### III. THE HUAYRA ERA (2011 – PRESENT)

*"Huayra" (pronounced WHY-ra) is named after Huayra-tata — the God of Wind in Andean Quechua mythology.*

The Huayra represented a complete engineering reinvention. Where the Zonda used a steel and carbon composite tubular frame, the Huayra introduced a full carbon fibre/titanium monocoque. The engine switched to a twin-turbocharged Mercedes-AMG V12 — the M158 — producing 730 hp. The car also pioneered a unique active aerodynamic system: four independent carbon flaps (two at the front, two at the rear) adjust automatically at up to 100 times per second, balancing downforce and drag dynamically in response to speed, steering angle, braking, and acceleration.

#### Pagani Huayra Coupe (2011–2018) — The New Benchmark

Unveiled at Geneva 2011, the Huayra caused an immediate sensation. Motor Trend called it 'the most beautiful car of the decade.' It won multiple Car of the Year awards. The gull-wing doors, hand-stitched interior, and exposed titanium bolts throughout were not merely aesthetic — every detail served a purpose. The Huayra was also the first car to receive a type approval exemption in the United States from the airbag requirement, allowing it to be road-legal on US streets.

| Original Price | ~\$1.4M USD                           |
| Current Value  | \$2.5M – \$4.0M USD                   |
| Rarity         | Rare — Appreciating Rapidly           |

## Pagani Huayra Roadster (2017–2021) — Open-Air Magnificence

Converting the Huayra to a roadster required a complete structural redesign. Without a roof, significant torsional rigidity is lost — Pagani solved this by developing a new carbon fibre composite called Carbotitanium+, which is woven with titanium threads to achieve stiffness exceeding the coupe's monocoque. The result was a roadster 14 kg lighter than the coupe despite the structural reinforcement. The engine was also upgraded to 754 hp, and a 7-speed sequential gearbox was introduced.

|                |                                       |

| Current Value  | \$3.5M – \$6.0M USD                   |
| Rarity         | Very Rare — Roadsters Command Premium |

PAGANI

## Pagani Huayra BC (2016) — BC: Benny Caiola

The Huayra BC (named in honour of Benny Caiola, Pagani's first customer and lifelong friend who passed away in 2010) is a stripped, track-focused variant of the Huayra. The BC is 202 kg lighter than the standard car, uses a new Carbotitanium monocoque, and produces 789 hp. The aerodynamics are upgraded with larger active flaps and a fixed rear wing capable of generating more downforce. Only 20 were built, making it one of the most exclusive modern hypercars on earth.

|                |                                         |
|----------------|-----------------------------------------|
| Engine         | Mercedes-AMG M158 6.0L Twin-Turbo V12   |
| Power          | 789 hp (588 kW)                         |
| Torque         | 1,100 Nm (811 lb-ft)                    |
| 0–100 km/h     | 2.9 seconds                             |
| Top Speed      | 370 km/h (230 mph)                      |
| Weight         | 1,218 kg (2,685 lb)                     |
| Aero           | 6 Active Flaps + Fixed Rear Wing        |
| Units Built    | 20                                      |
| Original Price | ~\$2.7M USD                             |
| Current Value  | \$7M – \$12M USD                        |
| Rarity         | Extremely Rare — Immediate Appreciation |

## Pagani Huayra BC Roadster (2019)

Combining the open-top freedom of the Roadster with the track-focused engineering of the BC, the BC Roadster is widely regarded as the ultimate Huayra derivative. It uses the same advanced Carbotitanium+ monocoque as the Roadster but with BC performance components. The exhaust system is made entirely from Inconel superalloy — the same material used in jet engines — and the sound it produces has been described as 'the greatest engine noise ever recorded in a road car.'

|                |                                       |
|----------------|---------------------------------------|

## Pagani Huayra Tricolore (2021) — Celebrating Italian Air Force

Created to celebrate the 60th anniversary of the Frecce Tricolori — Italy's legendary aerobatic display team — the Tricolore is one of the most visually spectacular Paganis ever made. Three cars were built, each referencing one of the aircraft from the display team's history: the F-86 Sabre, the Fiat G.91, and the Aermacchi MB-326. The paint and livery on each car reproduces the Italian national colours in the style of the corresponding aircraft. The interior features hand-stitched leather in the cockpit style, with machined aluminium controls inspired by fighter jet instrumentation.

PAGANI

## IV. THE UTOPIA — A NEW CHAPTER (2022 – PRESENT)

*"Utopia is not a destination — it is a way of thinking, a reason to keep pushing beyond what is thought possible."*

— Horacio Pagani

Unveiled in September 2022 at a private event in Milan, the Pagani Utopia represents a deliberate philosophical departure. After decades of building increasingly extreme track-weapon hypercars, Horacio Pagani wanted to return to the pure joy of driving — a car that was engaging, analogue, involving, and beautiful on the road, not just at the limit of a race circuit.

The Utopia features a manual gearbox option — a 7-speed manual with a traditional H-pattern gate — alongside an automatic for those who prefer it. This decision was seen as revolutionary in the hypercar world, where paddles and dual-clutch systems have become the norm. The engine is a new bespoke AMG V12 twin-turbo unit, and the chassis is constructed from Pagani's proprietary Carbo-Titanium HP62-G2 composite — stronger and lighter than any previous Pagani monocoque.

### Design Philosophy of the Utopia

The Utopia's exterior was designed entirely by Horacio Pagani and his daughter Cristina, who now leads the design studio. The body references Art Nouveau and Baroque sculpture: surfaces flow and curve in three dimensions, with no flat panels anywhere on the car. Each body panel is hand-formed in carbon fibre and finished in a multi-stage process that includes sanding, priming, and lacquering by hand. Under certain lighting conditions you can see the actual weave of the carbon fibre through the lacquer.

The interior features exposed machined aluminium suspension components visible through glass panels in the floor, clock-style instrument dials machined from solid aluminium, hand-stitched leather that takes a craftsman over

200 hours to complete, and more than 600 individually machined metal components — many of which are made from titanium.

PAGANI

## V. COMPLETE MODEL COMPARISON

| Model              | Year | HP  | 0–100 | Vmax      | Units | Price New | Value Now  |
|--------------------|------|-----|-------|-----------|-------|-----------|------------|
| Zonda C12          | 1999 | 394 | 4.2s  | 320 km/h  | ~10   | \$300K    | \$1.5–2.5M |
| Zonda S            | 2002 | 547 | 3.7s  | 345 km/h  | ~25   | \$350K    | \$1.8–3.0M |
| Zonda F Coupe      | 2005 | 602 | 3.6s  | 355 km/h  | ~25   | \$670K    | \$3.0–5.0M |
| Zonda F Roadster   | 2006 | 602 | 3.7s  | 350 km/h  | ~25   | \$800K    | \$3.5–6.0M |
| Zonda R (Track)    | 2009 | 740 | 2.7s  | 370 km/h  | 5     | \$2.0M    | \$7–12M+   |
| Zonda Cinque       | 2009 | 669 | 3.4s  | 370 km/h  | 10    | \$1.7M    | \$10–18M+  |
| Zonda Revolucion   | 2013 | 789 | 2.7s  | 350 km/h  | 5     | \$2.8M    | \$15–25M+  |
| Huayra Coupe       | 2011 | 730 | 3.3s  | 383 km/h  | 100   | \$1.4M    | \$2.5–4.0M |
| Huayra Roadster    | 2017 | 754 | 3.1s  | 383 km/h  | 100   | \$2.4M    | \$3.5–6.0M |
| Huayra BC          | 2016 | 789 | 2.9s  | 370 km/h  | 20    | \$2.7M    | \$7–12M    |
| Huayra BC Roadster | 2019 | 800 | 2.8s  | 370 km/h  | 40    | \$3.5M    | \$9–15M    |
| Huayra Tricolore   | 2021 | 840 | 2.7s  | 370+ km/h | 3     | \$15M+    | \$20–30M+  |
| Pagani Utopia      | 2022 | 864 | 2.9s  | 360 km/h  | 99    | \$2.2M    | \$4.5–7.0M |

*\* Prices are approximate and in USD. Resale values vary based on specification, provenance, mileage, and colour. All Paganis are sold without discounts and typically appreciate significantly above retail.*

## VI. RARITY, INVESTMENT & AUCTION RECORDS

### Why Pagani Values Only Go Up

Pagani builds fewer cars in an entire year than Ferrari produces in a day. The brand has never exceeded 40 cars per year in total production, and many models are limited to fewer than 10 units. Every Pagani that comes to auction or private sale commands a significant premium above its original retail price — in many cases the premium is 3x to 10x the original cost.

The factors driving Pagani's investment appeal are: (1) Absolute scarcity — fewer than 150 Paganis of all types exist. (2) Artisanal quality — each car takes 6–12 months to hand-build. (3) No depreciation — Pagani buyers are pre-vetted; cars cannot be resold within 2 years without brand approval. (4) Provenance documentation — every Pagani comes with full build records and is tracked by the factory through its life. (5) Global collector demand far exceeds supply.

### Notable Auction Results

| Car                       | Year Sold | Auction House  | Result (USD)          |
|---------------------------|-----------|----------------|-----------------------|
| Zonda Revolucion (1 of 5) | 2022      | RM Sotheby's   | \$10,120,000          |
| Zonda Cinque Roadster     | 2023      | Bonhams        | \$8,500,000 (est.)    |
| Zonda R #002              | 2021      | Private Treaty | \$9,000,000+          |
| Huayra BC #001            | 2022      | Gooding & Co.  | \$5,800,000           |
| Zonda F Roadster          | 2020      | RM Sotheby's   | \$4,200,000           |
| Huayra Tricolore          | 2024      | Not offered    | \$20M+ (est. insured) |
| Zonda Cinque Coupe        | 2023      | Private Treaty | \$12,500,000 (est.)   |

### Rarity Tiers

| Tier       | Units Built | Models                              | Collector Priority         |
|------------|-------------|-------------------------------------|----------------------------|
| PINNACLE   | 3–5         | Zonda R, Revolucion, Tricolore      | Museum / Generational Hold |
| ULTRA RARE | 6–20        | Cinque, Huayra BC, One-off Specials | Ultra High Net Worth       |
| VERY RARE  | 21–50       | Zonda F, Huayra BC Roadster         | Major Collector            |
| RARE       | 51–100      | Huayra Coupe, Roadster, Utopia      | Serious Collector          |
| LIMITED    | 101+        | Zonda C12/S, some special editions  | Enthusiast/HNW             |

## VII. TECHNOLOGY, MATERIALS & CRAFTSMANSHIP

### Carbon Fibre Innovation

Pagani's mastery of carbon fibre is unrivalled outside Formula 1. The brand has developed several proprietary composites over the years: Carbotitanium (carbon fibre woven with titanium threads), Carbotanium+ (an advanced variant with improved fibre orientation), and Carbo-Titanium HP62-G2 (the latest generation, used in the Utopia, which achieves stiffness and energy absorption beyond any predecessor).

In the Pagani atelier, each component is hand-laid in an autoclave at precisely controlled temperatures. After curing, every panel is individually measured, checked against a 3D scan, and either passed or rejected. The reject rate for carbon fibre panels is approximately 40% — all rejects are destroyed.

### The Mercedes-AMG Partnership

Every Pagani has been powered by Mercedes-AMG. The relationship began in 1992 when Horacio Pagani — with Juan Manuel Fangio's personal intervention — convinced Mercedes-AMG to supply a naturally aspirated V12 engine for the prototype that would become the Zonda. AMG hand-built each engine specifically for Pagani, with tolerances tighter than production AMG engines.

When AMG moved away from naturally aspirated V12s, Pagani switched to the twin-turbocharged M158 for the Huayra. Each engine is hand-assembled, signed by its builder, and dynamometer-tested before delivery to San Cesario. Pagani then further modifies the engine management, exhaust, and intake systems in-house.

### Interior Craftsmanship

A single Pagani interior can contain more than 600 individually machined metal components — many in titanium or aerospace-grade aluminium. Leather is sourced from a single tannery in Italy that has supplied Pagani since 1999, and each hide is inspected and approved before cutting. The leather-cutting and stitching is done by hand using traditional techniques, taking 200–400 hours per car depending on specification.

Dials, switches, and controls are machined from solid metal billets. There are no plastic components inside a Pagani — every touch point is either carbon fibre, aluminium, titanium, or leather. The gear knob alone takes a craftsman 8 hours to machine and finish.

## VIII. ONE-OFFS, SPECIALS & BESPOKE COMMISSIONS

Beyond limited editions, Pagani has produced an number of unique one-off commissions for exceptional clients. Each is a complete redesign tailored entirely to the customer's vision, approved by Horacio Pagani personally.

### **Zonda HP Barchetta (2018)**

3 units, open-top, no windscreen, 789 hp, est. \$17.6M each — the most expensive new car ever sold at the time of its release. Three customers were personally selected by Horacio Pagani, one of whom is Pagani himself.

### **Zonda 760 Series (2012–2015)**

Seven unique 760 variants built for individual customers, each unique in aero configuration, bodywork, and interior. All feature uprated 760 hp engine spec. Values: \$8M – \$20M+ depending on configuration.

### **Zonda Uno (2013)**

Unique one-off based on Zonda Cinque architecture with bespoke exterior redesign. Built for a Chinese customer. Est. value: \$15M+

### **Huayra L'Ultimo (2017)**

The final standard Huayra Coupe ever built — number 100 of 100. Unique livery, unique serial number, all options fitted. Sold for approximately \$5M.

### **Huayra Imola (2020)**

5 units only, hardcore track-legal version with full titanium roll cage, 800+ hp, massive aero package. Named after the Autodromo Enzo e Dino Ferrari in Imola. Est. value: \$6M – \$10M.

### **Utopia Roadster (2024)**

Open-top version of the Utopia announced 2024. 99 units. All reported sold before public unveiling. Est. price: \$3.0M+. Deliveries from 2025.

## IX. PERFORMANCE RECORDS & TRACK TIMES

### Nurburgring Nordschleife — The Green Hell

The Nurburgring Nordschleife (the 'North Loop') is the world's most demanding test track — 20.8 km of undulating, narrow, high-speed tarmac with over 170 corners. A sub-7-minute lap places a car in the absolute elite of performance. Pagani has multiple entries in the all-time records.

| Car                     | Time   | Year | Category                      |
|-------------------------|--------|------|-------------------------------|
| Pagani Zonda R          | 6:47.5 | 2010 | Track Car (Road-Legal Exempt) |
| Pagani Zonda Revolucion | 6:56.0 | 2013 | Track Car Record              |
| Pagani Huayra           | 7:27.0 | 2012 | Road Supercar                 |
| Pagani Huayra BC        | 7:08.3 | 2016 | Road Hypercar                 |
| Pagani Huayra Imola     | ~6:55  | 2020 | Track-Legal Hypercar          |
| Pagani Utopia           | ~7:10  | 2023 | Road Hypercar (est.)          |

### Top Speed Records

Pagani does not officially submit cars for top speed record attempts — Horacio Pagani believes the soul of his cars is best expressed in corners, not straight lines. Nevertheless, testing data and owner-verified runs have established the following benchmarks:

| Model              | Official Vmax | Tested/Claimed | 0–200 km/h |
|--------------------|---------------|----------------|------------|
| Zonda C12          | 320 km/h      | ~320 km/h      | ~11.8s     |
| Zonda S 7.3        | 345 km/h      | ~345 km/h      | ~10.5s     |
| Zonda F            | 355 km/h      | ~360 km/h      | ~9.8s      |
| Zonda R            | 370 km/h      | 370+ km/h      | ~7.5s      |
| Zonda Revolucion   | 350 km/h      | ~370 km/h      | ~7.2s      |
| Huayra Coupe       | 383 km/h      | 383 km/h       | ~8.9s      |
| Huayra BC          | 370 km/h      | ~375 km/h      | ~8.1s      |
| Huayra BC Roadster | 370 km/h      | ~372 km/h      | ~8.0s      |
| Pagani Utopia      | 360 km/h      | ~365 km/h      | ~8.5s      |

## X. THE FUTURE OF PAGANI

### Electrification & Pagani's Stance

Horacio Pagani has stated publicly that he will not rush into full electrification. In his view, the experience of driving a Pagani is inseparable from the sound, feel, and involvement of an internal combustion engine. A silent hypercar, he has said, is 'an oxymoron.' That said, Pagani has not ruled out hybrid technology as a future complement to combustion, particularly if it can enhance driver engagement rather than diminish it.

### Upcoming Models Confirmed/Rumoured

#### Utopia Roadster (2024–2025)

Open-top Utopia with full structural redevelopment. 99 units. Expected deliveries begin 2025. All reportedly allocated. Pricing est. \$2.8M–\$3.2M new.

#### Huayra R (Track) — Rumoured

An extreme track-only Huayra variant with full race spec, similar in concept to the Zonda R. Rumoured 900+ hp. Not officially confirmed.

#### Next Generation Platform — Post-2026

Pagani is reported to be developing the next-generation chassis platform that will succeed the Huayra/Utopia architectures, potentially with mild-hybrid assistance and a new bespoke AMG engine.

#### Codalunga (2022) — Already Delivered

A special coach-built long-tail version of the Huayra, designed with Horacio Pagani's daughter Cristina. Only 5 built. Each took 3 years to create. Valued at \$7.4M new, resale estimates exceed \$15M.

*"Every car I build is a letter to the world. It says: beauty still matters. Craftsmanship still matters.  
The human hand still matters."*

— Horacio Pagani, 2022
